General

Once I connect my Scoreboard Remote device (iPhone 4s), the Set number always reverts back to Set "1." How do I fix this?

Once you connect the Scoreboard Remote device to the ScoreCam device, all scoreboard information (the scores, set values, etc.) from the Scoreboard Remote app will sync up to the ScoreCam app.

You can change the set value/number from the Scoreboard Remote app by tapping on the set number or by tapping and holding on the set number and entering in the desired set value. Once the two devices are connected, any changes on ScoreCam or Scoreboard Remote will sync in either direction. (Except for Game Clock information. If connected, it is only one way: Remote to ScoreCam)
