

Live Streaming

I want to run a Facebook Live with a manually operated and imbedded scoreboard, how do I do this? And is the compatibility with Facebook Live still in beta testing?

Update: Easiest solution to connect to Facebook Live is to use a service like [Restream](#) or [Castr](#).

Facebook Live, unfortunately, is still in beta due to Facebook not being developer friendly (to put it mildly). It will likely never come out of beta since they are unwilling to allow new, mobile, apps to use their service, other than their own, for Facebook Live.

More information, see link: [ScoreCam: Facebook Live](#)

It can be complicated so be sure to do lots of testing before you want to record a match. Here is some documentation to help you get going on live streaming: [ScoreCam: Live Streaming](#)

Unique solution ID: #1089
